## Education

| | |
|---|---|
| 2013 — 2017 | **Bachelor degree**, *Saint-Petersburg*, Peter the Great St.Petersburg Polytechnic University, departament of applied mathematics and mechanics. |
| 2017 — 2019 | **Master degree**, *Saint-Petersburg*, Peter the Great St.Petersburg Polytechnic University, departament of applied mathematics and mechanics. |

### Master thesis

| | |
|---|---|
| 2019 | **Special kernel density estimator for finite sample size conditions**. |

Work is dedicated to research of theoretical accuracy of statistical kernel density estimator of special type for finite sample size conditions.

## Experience: 3 years 3 months

august 2019 — now **Saint-Petersburg State University, Chebyshev Laboratory**, *engineer-researcher*.

- Work in team on development of special statistical instrument for geo-data analysis based on Gaussian Processes (multi-output GP, sparse GP) written mostly on Python language. Adding new features, refactoring of existing codebase. Research for relevant scientific articles in given subject area.

- Project work on software for solving inverse problems for seismic data. Developing specific approach based on previously developed software. Using Tensorflow/Torch frameworks. Participation in development and testing on real data.

- Development of software for solving Riemann problems, which appear in porous media hydrodynamics. Search for literature and articles, algorithm development and implementation. Created library on C++ for using in Python project via Ctypes.

- Fine-tuning advanced hydrodynamic simulations in Dumux with Bayesian Optimization technics, using botorch. In this project I took part in development of original algorithm and implementation. Also here I worked with experimental dashboards like Tensorboard and building custom UI for developed ML-system with PyQt5.

## Skills

| | |
|---|---|
| For scientific computation: | Python (numpy, scipy, matplotlib, Jupyter, torch, keras, autograd), R, Matlab, Mathematica |
| Mathematical background: | statistics and probability theory (random functions and fields), linear algebra, calculus. |

| | |
|---|---|
| Computer science background: | Standard course of algorithms and numerical methods, various optimization methods, statistical data analisys, ML: regression of all types, table data classification. |
| More information and keywords: | |

- Decent 5-year experience with **Linux** [Ubuntu, Mint], system configuration, work via bash;

- **Git** version control system, managing repositories in **Bitbucket** and **GitHub** (pull-requests, code review and so on), **Notion** for task-tracking, **pytest** for testing;

- Work on project sketches in **Jupyter Notebooks**;

- Running code on servers remotely via ssh, building **Docker** containers, work with everything via **venv**;

- Experience with GPFlow, GPy for work with Gaussian Processes, gradient boosting with **CatBoost**; work skills with **Pandas** and sklearn;

- Advanced work with **LaTeX** for scientific texts and presentations;

- Experience with building up python package from scratch with **setuptools**;

- Experience with **PyQt5**, and also with PyInstaller for bulding binaries;

- Some experience with C/C++ (parallel computations with OpenMP, make-files and CMake, building small .so libs);

- Basic knowledge of PostgreSQL (including pgAdmin and libpq++);

- Basic knowledge of HTTP protocol, Django and FastAPI.

## Languages

| | |
|---|---|
| Russian | Native speaker |
| English | Upper-Intermediate |

## Online courses

| | | |
|---|---|---|
| Stepik | October 2022 | *Hadoop. System for big data processing* |

Learned basic things about Hadoop ecosystem, including HDFS, MapReduce, HBase and also Apache Spark. Practicing in writing code on Scala as a bonus.
